📍 Nellekenstraat 57 Lennik

Summary

Game developer and technical producer with a background in engineering and project management. Specialized in building efficient pipelines, controlling scope, and solving systems challenges. I bridge creative vision with technical execution to turn concepts into shipped, high-quality projects.

Skills

Creative Skillset

game development, digital music production, graphic design, 3D art, project management, 2D art

Core Technical Concepts

full stack development, cloud computing, distributed systems, software design patterns, machine learning, microservices, SaaS, computer vision, 3D rendering, web development, artificial intelligence

Technical Proficiency

Unreal Engine, Godot, Unity, C++, Scala, C#, Javascript, Python, C, Java, HTML, CSS, Lisp, GLSL

Languages

Dutch
Native

English
Fluent

French
Conversational

Education

Free University of Brussels Engineering & Applied Science	Master's degree • Graduated Cum laude 2022 - 2025
--	--

Gained expertise in advanced technical topics (artificial intelligence, computer vision, medical imaging, mathematical transforms, 3D rendering, ...) as well as business (development strategy, marketing, economics,...)

Free University of Brussels Computer Science	Bachelor's degree 2018 - 2022
---	----------------------------------

Classical training in fundamental and applied software engineering concepts, programming languages, algorithms and datastructures,... Focus on designing qualitative, scalable software and robust systems. Obtained experience with the languages and tools by means of large team-based projects.

Work Experience

Mckinsey & Company Solution Delivery Consultant	Brussels 2025-present
--	--------------------------

Consultant at McKinsey & Company specializing in end-to-end project management and execution of custom digital solutions. Focus on bridging the gap between high-level business strategy and technical execution to deliver high-performing software products for enterprise clients.

Pietercil Delby's Customer Service	Ternat, Belgium June 2017 - August 2017
---------------------------------------	--

Student job acting as a point of contact for customer order processing, ensuring timely and accurate fulfillment. Utilized an ERP system to manage the order pipeline and resolve customer inquiries, contributing to a smooth client experience.

Project Experience

VR Fall Risk Assessment Tool

- Managed full lifecycle of a novel VR balance testing application to replace a manual assessment process
- Translated clinical needs into a technical roadmap
- Led a team of physiotherapists to perform lab testing with volunteers and coordinated development to meet critical medical standards
- Successfully deployed clinical tool to provide automatisation to manual medical testing

Climate Change Simulator

- Identified a gap in public understanding of complicated climate change projections and the need to make abstract data accessible to a broad audience
- Improved awareness by creating a 3D VR communication tool providing an immersive experience that shows global warming impacts in any location

City Cost Visualizer

- Addressed market need for intuitive financial tools by designing an application that visualizes cost-of-living data on an interactive 3D globe
- Coordinated a team of 4 students to perform data analysis
- Created data-driven educational and sales tool, enabling users to make more informed financial and geographical decisions

Augmented HoloLens Training System

- Developed a HoloLens augmented reality prototype for reducing training costs and time for new factory workers
- Automated the training process for physical tasks, speeding up muscle memory generation by overlaying information onto the real-world environment

Adventurelands Mobile Game

- Built a mobile game designed for long-term user retention with a flexible, data-driven architecture
- Created a scalable game built for sustained user engagement and long-term commercial success

Tutoring

Math & programming tutoring for high school students	2019-2021
